ROBSON SEED FARMS

HALL, N. Y.

OUR POLICY

It has always been our first aim to supply seed of a quality—and at a price—which will bring back customers year after year. We do however believe that **Quality** should come ahead of price,—that the best seed is always the cheapest, no matter what may be the price.

In making up our vegetable list we confer with the New York State College of Agriculture and the New York State Experiment Station regarding the varieties that should be included.

If you desire additional information, or want seed of a variety that we do not list, write us and we will be glad to give you the information or secure the seed for you.

Our terms are cash with order or C. O. D., the purchaser to pay C. O. D. collection charges.

All prices here quoted are subject to change without notice and to our stocks being unsold.

If you are in the market for larger quantities of any variety than we have priced in this catalogue, please write for special quotations.

A star (★) in front of a variety indicates that the seed was grown from our own selected stock.

WE PROTECT YOU

We use all care which is humanly possible to grow our seeds carefully; to have them true to name and type; to thoroughly test them; to treat them for possible disease when advisable. However, there are many conditions such as climate, weather, and soil, over which we have no control. We, therefore, do not agree to be responsible for the results obtained from our seeds other than that we will gladly replace the seeds or refund the full purchase price, if notified at once, if they fail to grow or to be as represented.

PAYMENT OF TRANSPORTATION CHARGES

At the prices listed in this catalogue, we pay transportation charges on all seed except beans, peas, corn, potatoes and field seeds; but reserve the right to ship by Parcels Post, Express, or Freight—depending on rates. On the above special items we pay transportation costs on lots of one peck, or less, ordered at catalogue prices.

WE SERVE YOU BY---

- 1 **Growing in our own trial grounds** each variety and strain of seed that we handle together with many others.
- 2 **Selecting a limited list** of vegetable and grain varieties, considering quality of product and suitability for commercial production and marketing.
- 3 **Listing the faults** as well as the virtues of each variety.
- 4 **Placing a statement of germination** on every package as determined by our own or State Seed Laboratory test.
- 5 **Giving each lot of seed a stock number** and placing this number on the back of each package. If you want the same stock that you had last year, give us the number on the back of the package and we will either supply it or, if this is impossible, write you why we cannot do so and what we can offer in its place.
- 6 **Treating** all of our Cabbage, Cauliflower, Brussels Sprouts, Broccoli, Chinese Cabbage and Turnip seed with hot water under the direction of Dr. Chupp of the New York State College of Agriculture. This insures against certain diseases.

ROBSON CABBAGE SEED

Selected on our own farms, multiplied in the Puget Sound region of the State of Washington; this costs more but protects you against poor quality seed.

Due to a heavy freeze last winter our stocks of cabbage seed are limited. We suggest you order early.

All cabbage seed is hot water treated for disease. Germinations are made after treatment and appear on every package.

Golden Acre: 65 days. This variety has been improved a great deal in the past few years. Our strain is very early, producing uniform round heads weighing from two to four pounds. Golden Acre is a small early strain of Copenhagen Market and is a money maker in years when there is a high early market. Pkt. \$.10; oz. \$.40; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00.

★**Robson Copenhagen Market:** 75 days. There are a great many different strains of Copenhagen Market. Some are earlier than ours but on these the yield is usually small. For growers who desire an Early Strain, we recommend our Golden Acre. Our Copenhagen has been bred for uniformity and yield. Heads are solid and round weighing from four to six pounds. Pkt. \$.10; oz. \$.40; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00.

★**Robson Early Seneca:** 75 days. Originated and introduced by us two years ago. A large cabbage of the Copenhagen type that heads up solid when small and can be shipped or may be left, under normal conditions, until ripe and makes a large cabbage suitable for Kraut. The head is round and weighs from five to eight pounds. The quality is excellent. Pkt. \$.10; oz. \$.40; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00.

Glory of Enkhuizen: 85 days. Having lost our crop of seed of this variety for two years we are forced to purchase imported seed. The seed is a strain of "Glory" that we have been watching for several years. It is not as uniform in growth as our own strain but has given very heavy yields which after all is what the grower wants.

The heads are large, (eight to ten pounds), solid, nearly round. Very popular for Kraut. Pkt. \$.10; oz. \$.25; $\frac{1}{4}$ lb. \$.75; lb. \$2.50.

★**Robson Short Stem Danish Ballhead:** 100 days. Our strain of Short Stem Danish Ballhead has met with approval wherever it has been grown. Each year we have been selecting to secure a uniform, heavy yielding strain of the true ballhead type that would keep well in storage. Results indicate that we have made great headway along these lines.

Many growers report that they are better satisfied with our seed than with seed costing twice as much. Yields of over twenty tons per acre are not uncommon.

Dealers report that our Danish Ballhead keeps well in storage. This is due to the fact that it is the true ballhead type in both shape and maturity. Pkt. \$.10; oz. \$.40; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00.

We are recommending Robson Short Stem Danish Ballhead Cabbage Seed.

J. M. Slayton & Co., Tully, N. Y.

RED OR PURPLE CABBAGE

In some sections the growers have in the past had difficulty in getting a satisfactory yield of red or purple cabbage. In order to help them, we bred a larger type of cabbage that will yield up with our green Danish Ballhead. We now find that in some sections this grows too large and is not quite dark enough in color to suit the buyers. In the future we will list two strains of Red Cabbage.

★**Large Red Danish Ballhead:** 100 days. Short stem, vigorous grower. Heads large, solid, nearly round; color purplish red. Pkt. \$.10; oz. \$.40; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00.

Small to Medium Red Danish Ballhead: 100 days. Medium stem, round head, trifle darker color than above strain. Medium size. As we have not been growing this smaller strain for several years we do not have seed of our own stock. This is imported seed coming from Denmark. Pkt. \$.10; oz. \$.25; $\frac{1}{4}$ lb. \$.75; lb. \$2.50.

See Golden Cross Hybrid Sweet Corn Page 7.

$\frac{1}{2}$ lb. orders may be figured at pound rates—1 lb. of Robson's Cabbage Seed will plant 3 to 4 acres. We pay transportation charges on all cabbage seed.

VEGETABLE PRICE LIST

ASPARAGUS SEED AND ROOTS

1 oz. of seed will produce about 250 plants

Mary Washington: Earlier, larger and longer than the original Washington and quite as rust resistant. Tips are very tight and do not "sprangle out" or "blow" prematurely. Pkt. \$.10; oz. \$.15; $\frac{1}{4}$ lb. \$.35; lb. \$1.20.

★**Mary Washington Roots:** These are fine large one year old roots grown on our own farms from seed selected from our most vigorous and best producing plants. Doz. \$.50; 50 roots \$1.50; 100 roots \$2.00 postpaid.

SNAP BEANS

1 lb. will sow 50 ft. row

BOUNTIFUL

Our fields are carefully inspected and rogued for diseased and off-type plants.

★**Bountiful:** 49 days, 65 seeds per oz. Bountiful among the green podded varieties is in the same class as Sure Crop in the yellow. It is early, ships well and meets with a good demand on most markets but is not of the best quality. Pods $6\frac{1}{2}$ to 7 inches long, flat, light green. Pkt. \$.10; lb. \$.25; 15 lbs. \$2.10; 100 lbs. \$12.00.

★**Tendergreen:** 54 days, 65 seeds per oz. We have never found a snap bean that equals Tendergreen for quality. It yields well and in some tests has done better than Giant Green Pod. The pods are 6 to 7 inches long, smooth, round as a pencil, entirely stringless, light green color and very meaty. Pkt. \$.10; lb. \$.25; 15 lbs. \$2.50; 100 lbs. \$14.00.

Giant Stringless Green Pod: 54 days, 72 seeds per oz. One of the most popular round podded snap beans but not as good as Tendergreen. The pods are 6 to $6\frac{1}{2}$ inches long, medium green and stringless. It is used to some extent for canning but, as the pod of this variety is depressed between beans we feel that Tendergreen makes a better appearance. Pkt. \$.10; lb. \$.25; 15 lbs. \$2.30; 100 lbs. \$13.30.

New Stringless Black Valentine: 49 days, 81 seeds per oz. A green snap bean that has become very popular for market in some sections. While it should be classified as a flat podded variety, it is so thick that both flat and round podded markets will take it. Pods $6\frac{1}{2}$ to 7 inches long, nearly straight, dark green and stringless. Pkt. \$.10; lb. \$.25; 15 lbs. \$2.30; 100 lbs. \$13.30.

Burpee's Kidney Wax: 54 days, 73 seeds per oz. One of the best of the yellow varieties of snap beans. Flattened pods are about 6 inches in length. Bright lemon color nearly round and entirely stringless. Pkt. \$.10; lb. \$.30; 15 lbs. \$2.55; 100 lbs. \$15.00.

Sure Crop Wax: 53 days, 65 seeds per oz. This variety is inferior in quality to Burpee's Kidney Wax and is only included in our variety list because of its popularity as a shipping bean. It is a very vigorous growing, productive, flat, yellow bean, 6 to 7 inches long. Pkt. \$.10; lb. \$.25; 15 lbs. \$2.45; 100 lbs. \$15.00.

Round Pod Kidney Wax: (Also known as Brittle Wax) 52 days, 78 seeds per oz. An excellent stringless variety for canning and home use. Pods 5 to 6 inches long, medium yellow, round slightly curved, very brittle and stringless. Pkt. \$.10; lb. \$.30; 15 lbs. \$2.70; 100 lbs. \$16.00.

★**Pencil Pod Black Wax:** 52 days, 88 seeds per oz. A very popular round podded variety that has been improved a great deal in the past few years. Pods large, $6\frac{1}{2}$ to 7 inches long, nearly straight, stringless, free from fiber, fleshy and brittle. Pkt. \$.10; lb. \$.25; 15 lbs. \$2.45; 100 lbs. \$14.25.

POLE BEANS

$\frac{1}{2}$ lb. will sow 100 ft. in hills

Scotia: 72 days, 84 seeds per oz. Because of unusual quality we have continued to raise this variety for our own use and feel that, if it were better known, it would be used more generally. A few hills along a fence or with some other support will produce enough, if kept picked, for the average family. The pod is $6\frac{1}{2}$ to 7 inches long, green, round and very fleshy. Scotia is ready about the time that the bush varieties are gone. Pkt. \$.10; lb. \$.35; 15 lbs. \$3.30; 100 lbs. \$19.00.

Kentucky Wonder Wax: 68 days, 80 seeds per oz. The most popular yellow podded pole variety. The plant is very vigorous and productive, the quality however is only fair and the pods are rather stringy. Pods are 7 to 8 inches long, flat and waxy yellow. Pkt. \$.10; lb. \$.35; 15 lbs. \$2.70; 100 lbs. \$15.20.

Imperator carrot is fine for bunching. See page 6.

GOLDEN CROSS BANTAM SWEET CORN

We planted the sample of Golden Cross Bantam Hybrid Sweet Corn and found that it matured more rapidly than any corn we have ever planted.

We also found this corn delicious eating.

December 31, 1933

Yours very truly,

BROWNSEY & MARKS

R. J. BROWNSEY

For description and prices see page 7.

We pay transportation on beans in lots of 15 lbs. or less at above prices.

LIMA BEANS

Fordhook Bush: 75 days, 22 seeds per oz. Most popular bush lima of the potato type. The plants are large, vigorous and very productive. Pods 4 to 5 inches in length and contain 3 to 4 thick green beans of the finest quality. Pkt. \$.10; lb. \$.35; 15 lbs. \$3.30; 100 lbs. \$19.00.

Burpee's Bush: 75 days, 20 seeds per oz. Larger size and slightly earlier than the original Burpee strain. Plants are large, erect, vigorous and very productive. Pods 5 to 6 inches long containing 4 to 5 beans. Beans are large, plump, flat. Color white with greenish tinge when ripe. Pkt. \$.10; lb. \$.35; 15 lbs. \$3.30; 100 lbs. \$19.00.

Henderson Bush: 68 days, 90 seeds per oz. An early, small type of lima. The variety commonly used by canners. It has been our observation

that this variety produces good crops in some localities where the larger bush varieties fail. Pods 3 to 3½ inches long containing 3 to 4 small beans of excellent quality. Pkt. \$.10; lb. \$.30; 15 lbs. \$2.40; 100 lbs. \$13.30.

Challenger: 92 days, 30 seeds per oz. A potato type pole lima of good quality. A strong climber and very productive. Pods 3½ to 4 inches long. Seeds large, almost as wide as long. Pkt. \$.10; lb. \$.40; 15 lbs. \$4.00; 100 lbs. \$22.80.

Early Leviathan: 79 days, 25 seeds per oz. We believe Early Leviathan to be the best early large seeded pole lima. We have never known of a crop failure among our customers. Pods 5 to 5½ inches long, straight and containing 5 to 6 very large flat beans. Pkt. \$.10; lb. \$.30; 15 lbs. \$3.15; 100 lbs. \$18.00.

TABLE BEETS

1 oz. will sow 100 ft. row

Crosby's Egyptian: 60 days. There seems to be some confusion as to what the correct type for this variety should be. We have held that the shape of the beet should be flattened, globe in shape, with small tap root. Exterior color of the root purple red. Flesh bright crimson red, zoned with a lighter shade. This beet is of fine quality and used extensively for "bunch beets." Many growers feel that the flattened shape makes the beet more attractive in the bunch when young. Pkt. \$.05; oz. \$.10; ¼ lb. \$.30; lb. \$1.00.

Early Wonder: 58 days. A selection from Crosby's Egyptian. The roots are smooth, nearly globular. Skin dark red, flesh bright crimson red with only faint zoning. If you want a very fine uniform round beet we recommend our Early Wonder. Pkt. \$.05; oz. \$.10; ¼ lb. \$.30; lb. \$1.10.

Detroit Dark Red: 68 days. The outstanding variety for produce shippers and canners. Roots are globular or nearly round, very dark, interior color blood red. Unless growing conditions are abnormal, the zones are so inconspicuous that the beet seems to be one solid color. Pkt. \$.05; oz. \$.10; ¼ lb. \$.30; lb. \$.90; 10 lbs. \$7.50.

MANGEL BEETS

5 lbs. will sow 1 acre

Danish Yellow Giant: The roots grow to a very large size, of deep yellow color, not as long as Long Red, but larger around, and are smooth and handsome, having small tops and very few side roots. They grow over two-thirds above the ground, so can be harvested with little trouble. Pkt. \$.05; oz. \$.08; ¼ lb. \$.15; lb. \$.45.

Golden Tankard: The tops are comparatively small, with the leaf stalks and veins distinctly tinged with yellow. The neck is small. The roots are large, ovoid, but with bottom usually of larger diameter than top, light gray above ground, deep orange below. The flesh is yellow, zoned with white. Pkt. \$.05; oz. \$.08; ¼ lb. \$.15; lb. \$.45.

Giant Half Sugar Rose: Desirable for stock feeding, affording not only a very large crop but also having higher nutritive value, being especially rich in sugar. The roots are rose colored above ground, white below, with white flesh. On account of growing partly out of the ground and the long ovoid shape the crop can be harvested easily and at less expense than any other root crop. Pkt. \$.05; oz. \$.08; ¼ lb. \$.15; lb. \$.45.

Mammoth Long Red: The roots are very large, light red, uniformly straight and well formed. The flesh is white tinged with rose. This strain under careful culture is enormously productive. Pkt. \$.05; oz. \$.08; ¼ lb. \$.15; lb. \$.45.

BROCCOLI

1 oz. will produce 2000 plants
Seed hot water treated.

Italian Green Sprouting: 60 days. An all season variety that comes into use about 60 days after transplanting. If started in hot bed April first, will be ready for use the first week in July. By successive plantings a supply can be had from July until hard freezing weather. Culture the same as for cabbage. Pkt. \$.15; oz. \$.75; ¼ lb. \$2.15; lb. \$7.50.

EARLY WONDER

BRUSSELS SPROUTS

1 oz. will produce 2000 plants
Seed hot water treated

Long Island Improved Dwarf: We have found this strain very desirable in that it will produce sprouts under less favorable conditions than any variety we have ever tried. The plants are of dwarf habit but furnish a large yield of sprouts of excellent quality. Pkt. \$.15; oz. \$.60; ¼ lb. \$1.90; lb. \$6.50.

CHINESE CABBAGE

1 oz. will produce about 2000 plants
Seed hot water treated

Chihli: Earliest and most sure heading of the Chinese varieties, producing long, solid, white cylindrical heads two feet long. If planted in spring it is apt to go to seed without producing heads. Sow seed about the middle of July for best results. Thin to about 1 ft in row. Pkt. \$.10; oz. \$.25; ¼ lb. \$.85; lb. \$2.80.

We pay transportation on all above seeds except beans and on them in lots of 15 lbs. or less.

RED CORED CHANTENAY

CARROTS

½ oz. will sow 100 ft. row

Red Cored Chantenay: 70 days. The canners and soup companies use a large proportion of the late carrot crop of New York State. They want a large chunky carrot of the Chantenay type but have always objected to the light colored core. Red Cored Chantenay is a strain of this old variety having a core practically as dark in color as the surrounding meat. The core is also less woody than some of the old strains. The roots are 5½ to 6 inches long, 2¼ inches thick at the top. Stump rooted, deep orange flesh. Not a good bunching variety. Pkt. \$.08; oz. \$.15; ¼ lb. \$.35; lb. \$1.15.

Chantenay: Same as above but does not have red core. Pkt. \$.05; oz. \$.12; ¼ lb. \$.35; lb. \$1.10.

Danvers Half Long: 75 days. This is the standard large bunching carrot. It is longer than Chantenay but not so thick. 6 to 7 inches long, 1¾ inches thick. Flesh deep orange and of good quality. Pkt. \$.08; oz. \$.15; ¼ lb. \$.40; lb. \$1.40.

Nantes: 68 days. For the home garden and market where quality counts we recommend Nantes. The roots are 6 to 7 inches long, 1¼ inches thick at top and almost the same diameter the whole length. The quality is better than the larger varieties. Color of flesh bright orange with a very inconspicuous core. The top is rather small and inclined to be brittle. Pkt. \$.08; oz. \$.15; ¼ lb. \$.40; lb. \$1.45.

Imperator: 77 days. An outstanding type bred for market garden use, and for shipping. Tops medium, but strong enough for good bunching. Roots have sloping shoulders, smooth, deep rich orange; uniformly tapered to a semi-blunt end. Flesh rich orange color, extending to center of root, with indistinct core; fine grained, tender and of fine quality. The roots are 7 to 8½ inches long, 1¾ to 2 inches thick at the top. Pkt. \$.10; oz. \$.20; ¼ lb. \$.55; lb. \$1.75.

CELERY

1 oz. will produce 10,000 plants

Golden Self Blanching: (Dwarf) 120 days. This, the original French Strain, is still very popular with market gardeners and shippers. More stocky than the new tall strains, very compact, stalks solid, good flavor. Blanches to a handsome golden yellow color. Pkt. \$.15; oz. \$.70; ¼ lb. \$2.25; lb. \$7.60.

Easy Blanching: 125 days. Much like Golden Self and stalks blanch white instead of yellow. Easy Blanching seems to be rather more resistant to disease. It grows taller than Golden Self Blanching but does not blanch quite as readily. Pkt. \$.15; oz. \$.65; ¼ lb. \$1.65; lb. \$5.70.

Golden Plume or Wonderful: 115 days. This variety is similar in many respects to Golden Self Blanching. It matures fully as early as that variety and in many localities has been found to be more resistant to attacks of blight and rust. The plants are semi-dwarf, stocky and vigorous growing with very full heart which blanches quickly to a rich golden yellow color. Of very attractive appearance, superior quality and fine nutty flavor. Pkt. \$.15; oz. \$.80; ¼ lb. \$2.75; lb. \$9.50.

Salt Lake or Utah: 135 days. We are listing this new variety in place of Giant Pascal. It is the best variety for storage for winter use that we know of. The stalks are large and the heart well developed. It blanches to a pure white and is crisp, brittle and of good quality. Pkt. \$.15; oz. \$.70; ¼ lb. \$2.25; lb. \$7.50.

CAULIFLOWER

1 oz. will produce 2000 plants

Snowball: (Seed hot water treated.) This is the standard variety for the Northeastern States. We have sold the mid-season strain for several years under the name of "Finger Lakes Snowball." In our trial grounds we have had very few plants that did not produce a marketable head. This is also true of the fields we have inspected where our seed was used. This year we have added an earlier strain of the same variety. It does not produce quite as large a head as the midseason strain but matures a week to ten days earlier.

When ordering specify whether you desire "Early" or "Mid-season" Strain. Pkt. \$.15; ¼ oz. \$.60; oz. \$1.90; ¼ lb. \$.625; lb. \$22.00.

NANTES CARROT

GOLDEN CROSS BANTAM

SWEET CORN Hybrids

One of the most important results of recent sweet corn breeding is the production of Hybrid varieties resistant to Bacterial Wilt (Stewarts Disease). This disease for the past three years has been gradually spreading until it now is found in practically all corn growing areas. The only practical method of combating this disease seems to be to use these resistant hybrids.

These hybrids are controlled crosses of pure bred strains and for the first year after the cross is made a very strong growing heavy yielding sweet corn of the highest quality is produced. As this vigor is only maintained one year after the cross is made it is necessary for the grower to purchase new seed every year. As Hybrid Corn requires special care, we limit our production to what we can personally supervise on our own farms.

★**Golden Cross Bantam:** 76 days. (See front cover) Golden Cross Bantam was originated by the United States Department of Agriculture and we were among the first to obtain stock seed. We feel that Golden Cross is the most desirable yellow sweet corn that has been developed.

Golden Cross is one of the most disease resistant varieties that we have tested and has produced excellent crops in sections where Bacterial Wilt has been the worst.

The stalks are very vigorous usually producing two good sized marketable ears. Golden Cross produces many suckers but unlike most varieties, under favorable conditions, these bear marketable ears maturing at the same time as those on the main stalk. At the Connecticut Experiment Station our Golden Cross Bantam produced 15,000 marketable ears per acre.

Stalk 6 feet tall. Ears 8 inches long, 12 to 14 rows of broad medium yellow kernels. In tests at Geneva Experiment Station this past year Golden Cross held on the stalk in edible condition longer than any other variety.

Maturing about 10 days later than Golden Bantam this variety makes an excellent corn for the market gardener or canner. The kernels of the seed parent used in making this cross are small so that it is very necessary that the grower shall not plant too thick. We recommend not over 6 lbs. to the acre. Pkt. \$.15; ½ lb. \$.30; lb. \$.50; 6 lbs. \$2.60; 12 lbs. \$4.75; 100 lbs. \$38.00.

★**Robson's Early Bantam Hybrid:** 73 days. Early Bantam Hybrid is a cross resulting from our own corn breeding work. This corn gives about 50% larger yield than ordinary Golden Bantam, is very vigorous and has a quality equal to Bantam. While not as resistant to Bacterial Wilt as Golden Cross Bantam Hybrid it seems to produce good yields where ordinary Golden Bantam is an entire failure. Pkt. \$.15; ½ lb. \$.25; lb. \$.45; 6 lbs. \$2.40.

★**Robson's Extra Early Bantam:** 64 days. Our Early Bantam is a bantam strain, developed through our breeding work; very early and has a quality as good or better than the old Golden Bantam. Extra Early Bantam produces a large number of ears and matures before other yellow corns are on the market thus giving top prices.

Like all true Bantams this variety is susceptible to wilt and is not recommended where wilt is a serious problem. St lk 4 to 4½ feet. Ears 6 inches long, 8 rowed, broad yellow kernel. Pkt. \$.10; ½ lb. \$.15; lb. \$.25; 6 lbs. \$1.25; 12 lbs. \$2.40; 100 lbs. \$17.00.

Whipple's Yellow: 75 days. An early yellow corn that has proved in some sections very profitable for market. The ears are large, 7 to 8 inches long, having 12 to 14 rows of deep kernels. They mature ready for use 10 days later than our Early Golden Bantam. The quality of the corn is very fine, but not quite as sweet as Bantam. Shows only slight resistance to wilt. Pkt. \$.10; ½ lb. \$.15; lb. \$.25; 6 lbs. \$1.20; 12 lbs. \$2.15; 100 lbs. \$15.20.

Stowell's Evergreen: 95 days. The standard main crop variety, much used for the home garden, market and canning. It is hardy and productive, very tender and sugary, remaining a long time in condition suitable for boiling. The ears about 8 to 9 inches long, 16 to 20 rowed with very white grain. The stalks are from 8 to 10 ft. high. Pkt. \$.10; ½ lb. \$.15; lb. \$.25; 6 lbs. \$1.20; 12 lbs. \$2.15; 100 lbs. \$15.20.

Country Gentleman: 93 days. This variety has a small white cob, densely covered with irregular rows of very long slender, white grains of excellent quality. The ears are 7 to 8 inches long. The stalks are from 7 to 8 ft. high. It is well adapted for canning as well as the home garden and market and many consider it the best of the late varieties. Pkt. \$.10; ½ lb. \$.15; lb. \$.25; 6 lbs. \$1.20; 12 lbs. \$2.15; 100 lbs. \$15.20.

I find your Golden Cross Hybrid Sweet Corn about two days earlier and more vigorous and yielding one hundred percent more than Whipples Yellow Corn. While not as early as Golden Early Market, it is ever so much more vigorous and blight proof.

December 30, 1933.

Walter G. Emerick, Watervliet, N. Y.

POP CORN

Japanese Hulless: If you are growing pop corn for your own use or sell it to discriminating neighbors, Japanese Hulless is the variety you should use. The popped kernels are large for the size of the corn, there are no hard centers, the kernel is very sweet and tender. Stalks about five feet tall, ear thick and about four inches long, kernel small pointed and white. Pkt. \$.05; lb. \$.20; 10 lbs. \$1.50; 100 lbs. \$10.00.

White Rice: The old standard white commercial variety. The yield is much larger than Japanese Hulless as the ear is almost twice as large but the quality is poor when compared to that variety. Pkt. \$.05; lb. \$.20; 10 lbs. \$1.50; 100 lbs. \$10.00.

Your neighbor is using Crow-Fcz Crow repellent. See page 15 for prices.

We pay transportation on corn in lots of 12 lbs. or less at above prices.

CLARK'S SPECIAL

CUCUMBERS

1 oz. will plant 100 hills

Clark's Special: 63 days. A white spine variety much like Woodruffs Hybrid and Harris Perfection. The cucumbers are 8½ to 10 inches long by 2½ inches in diameter slightly tapering toward both ends. It holds its dark green color well and can be shipped long distances. An ideal slicing variety as it grows straight and has very few seeds, also good for dills. Grows rather slim for commercial pickles. Pkt. \$.08; oz. \$.12; ¼ lb. \$.40; lb. \$1.35.

Early White Spine: (No 2603) 58 days. (See cut Page 12) We have been testing this strain of white spine for several years and last spring put out a number of samples for test. We have a report from the Erie County Farm Bureau showing that in their tests it out-yielded all other varieties. It is primarily a pickle variety as it grows very straight, square ended 7 to 8 inches long. The color is a good deep green. Flesh is solid and makes a firm pickle. Pkt. \$.05; oz. \$.10; ¼ lb. \$.30; lb. \$1.00.

Early Fortune: 64 days. Probably the most popular all purpose white spine variety where both pickles and slicers are wanted. In growth it is intermediate between Clark's Special and White Spine being about 8 inches long by 2½ inches in diameter. The fruit is slightly tapering. Under very dry conditions such as we had the past year it tends to produce crooked fruits. Pkt. \$.05; oz. \$.10; ¼ lb. \$.25; lb. \$.85.

Improved Long Green: 70 days. The largest of the black spine varieties. Hardy and fairly prolific. Fruits 12 to 14 inches long by 2½ inches in diameter, more or less warted, tapering toward stem end, dark green. Flesh white and firm. Pkt. \$.05; oz. \$.10; ¼ lb. \$.30; lb. \$1.00.

National Pickling: 56 days. This black spine variety might be called an improved Snow's Pickling which it closely resembles. Developed for the National Pickle Packers Association by the Michigan Agricultural College it has proven to be one of the best for small pickles. Mature cucumbers are 5½ to 6 inches long by 2½ inches thick. Pickles are dark green, square ended and very symmetrical in shape. Pkt. \$.08; oz. \$.12; ¼ lb. \$.35; lb. \$1.10.

ENDIVE

1 oz. will sow 100 ft. row

Full Heart Batavian: 90 days. An improved strain of Broad Leaved Batavian. A trifle earlier and more compact than the old strain. The center blanches to a creamy white and is excellent for salads. We prefer it to the curled varieties. Pkt. \$.05; oz. \$.15; ¼ lb. \$.40; lb. \$1.40.

Moss Curled: 95 days. More compact and finer cut leaves than "Green Curled" of which it is an improved strain. Center blanches to creamy white. Pkt. \$.05; oz. \$.15; ¼ lb. \$.35; lb. \$1.20.

KALE

½ oz. will sow 100 ft. row

Dwarf Scotch Curled: 55 days. A very hardy, green, low spreading variety. Leaves finely curled. Used for greens and garnishing. Use while young or only the top of the older plants. 16 to 20 inches tall. Pkt. \$.10; oz. \$.15; ¼ lb. \$.40; lb. \$1.15.

Tall Scotch Curled: 60 days. So hardy that frost improves rather than injures the quality, leaves plumelike, light green and deeply cut. 3 to 4 ft. high. Pkt. \$.08; oz. \$.12; ¼ lb. \$.30; lb. \$.90.

EGG PLANT

1 oz. will grow 1500 plants

Black Beauty: 81 days. A valuable variety for the home gardeners and truckers. Earlier and nearly as large as the New York Improved. Fruits egg-shaped, smooth, very dark purple and hold color well. Pkt. \$.12; oz. \$.40; ¼ lb. \$1.15; lb. \$3.80.

New York Improved: 83 days. This is the favorite market variety. Fruits large, oval, black-purple and glossy. Pkt. \$.12; oz. \$.40; ¼ lb. \$1.15; lb. \$3.80.

KOHL RABI

½ oz. will sow 100 ft. row

Early White Vienna: 55 days. The best table variety. This is a vegetable that we feel would be used more if it were better known. When cooked it has a more delicate flavor than purple top turnips and is not so watery. Should be used as soon as large enough as they grow woody as they grow older. Bulbs 2 to 3 inches in diameter, very light green; flesh white. Pkt. \$.10; oz. \$.20; ¼ lb. \$.50; lb. \$1.65.

LETTUCE

1 oz. will produce 3000 plants

Prize Head: We think this is the best early lettuce for home use. The name is rather unfortunate as it is not a head variety. Plants are medium size, crisp and tender. Leaves are crumpled and frilled at the edges. The color of the leaves is light brown which spoils its appearance as a market variety. Pkt. \$.05; oz. \$.20; ¼ lb. \$.50; lb. \$1.65.

Black Seeded Simpson: The best green leaf lettuce for the home garden and for growing out of doors for market. The leaves are light green, large crumpled and very tender. This variety seems to do well everywhere. Too tender for forcing under glass for market. Pkt. \$.05; oz. \$.15; ¼ lb. \$.40; lb. \$1.20.

Grand Rapids: A loose leaf lettuce, much frilled, not nearly so tender as Black Seeded Simpson but better as a forcing variety for market as it will stand handling better. Also grown as an outdoor market variety. Pkt. \$.05; oz. \$.15; ¼ lb. \$.40; lb. \$1.40.

May King: Very early head variety. Head is small but very compact. Leaves light green tinged with brown at edges, inside color is rich creamy yellow. Very good for home garden and early market. Pkt. \$.05; oz. \$.15; ¼ lb. \$.40; lb. \$1.20.

New York or Wonderful: This large headed variety is known on the market as Iceberg. Very desirable market variety if it can be grown well. Leaves are dark green, curled at the edges. Heads are large and solid under favorable weather conditions. Pkt. \$.05; oz. \$.20; ¼ lb. \$.60; lb. \$1.90.

Big Boston: The standard market head lettuce in the east until the west started shipping "Iceberg" in large quantities. Heads are large and compact, leaves large almost smooth, wavy at edges, light green tinged with reddish brown. Heart greenish white tinged with yellow. Pkt. \$.05; oz. \$.15; ¼ lb. \$.40; lb. \$1.20.

Cos or Romaine: (White Paris Self Folding). A medium large well blanching, firm, leaf shaped head; leaves oval in form, flat and smooth, color medium dark green. Good quality. Pkt. \$.05; oz. \$.20; ¼ lb. \$.50; lb. \$1.50.

MUSKMELON OR CANTALOUPE

1 oz. will plant 100 hills

★**Benders Surprise:** 95 days. We feel that this is the most satisfactory melon that we grow. Due to a difference of opinion as to what the ideal Benders Surprise should be, there are a great many different types now on the market. Some have bred for size and have sacrificed quality. Our ideal has been a melon averaging 7 to 8 lbs. heavily netted, thick sweet orange yellow meat, firm but free from stringiness. Our supply of seed is limited this year on account of a severe hail storm. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.65; lb. \$2.15.

★**Delicious:** 86 days. This may be described as an early Bender. It is a comparatively new variety. The melons average about five pounds. A little flatter than Benders and 10 days earlier. The quality is very good. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.65; lb. \$2.15.

Golden Champlain: 82 days. Said to be a cross between Emerald Gem and Fordhook. A very early, salmon fleshed melon of medium size, flesh rather soft. The melon is round about 4 to 5 inches in diameter. Pkt. \$.08; oz. \$.15; $\frac{1}{4}$ lb. \$.50; lb. \$1.65.

Honey Rock: 95 days. Also known as Sugar Rock. A new melon, nearly round, averaging about 4 lbs. Skin grey-green covered with coarse netting, flesh thick, juicy, orange-salmon, fine flavor. Good for home garden and nearby market. Pkt. \$.08; oz. \$.15; $\frac{1}{4}$ lb. \$.45; lb. \$1.40.

WATERMELON

4 oz. will plant 100 hills

Stone Mountain: 90 days. A high quality large oval-round melon that is becoming popular in the north. Dark green rind. Flesh rich scarlet, fine grained and sweet. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.40; lb. \$1.15.

Klondike: 82 days. An early variety, very popular in the western states. In test at Cornell, Klondike has proven to be one of the best watermelons for our climate. Fruits oblong, slightly tapering to blossom end, medium sized, with slight ribs; rind medium hard. Flesh bright deep red, very sweet and tender, seeds small, black and white. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.40; lb. \$1.15.

PEPPERS

1 oz. will produce 1500 plants

Harris Earliest: We recommend this for an early variety. The peppers are only medium size and the meat is rather thin but it is, we believe, the best of the early varieties of sweet peppers. It is a very heavy bearer. Pkt. \$.10; oz. \$.55; $\frac{1}{4}$ lb. \$1.70; lb. \$5.70.

Harris Early Giant: 63 days. One of the earliest of the large sweet peppers. It is of good quality, fairly productive but like Harris Earliest rather thin meated. It grows from 4 to $4\frac{1}{2}$ inches long by $3\frac{1}{2}$ inches in diameter. Pkt. \$.10; oz. \$.55; $\frac{1}{4}$ lb. \$1.70; lb. \$5.70.

California Wonder: 75 days. This is the thickest meated pepper that we know of. Fruits are large, $4\frac{1}{2}$ inches long by 4 inches thick. Very attractive, smooth, deep green, sweet and mild. Some growers feel that California Wonder is too late for the East but we have found that for green peppers the very thick meat makes it possible to pick it less mature than other varieties. Varies in productiveness in different soils. Pkt. \$.10; oz. \$.55; $\frac{1}{4}$ lb. \$1.70; lb. \$5.70.

Giant Cayenne: One of the best "hot peppers." The fruit is 3 inches long and 1 inch through. Ripens early, very prolific. Pkt. \$.10; oz. \$.55; $\frac{1}{4}$ lb. \$1.70; lb. \$5.70.

PARSLEY

1 oz. will sow 100 ft. row

Moss Curled or Triple Curled: A compact plant with very dark green leaves, exceedingly finely cut and curled. Very desirable for garnishing and decorative purposes. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.25; lb. \$.75.

BENDER'S SURPRISE MELON

ONION SEED

$\frac{1}{2}$ oz. will sow 100 ft. row

Mountain Globe Danvers: A very early strain of Yellow Globe onion originating in the mountains of Colorado. The bulbs are a good deep yellow color, slightly smaller than Yellow Globe Danvers. Desirable where season is short or for early market. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.50; lb. \$1.65.

Yellow Globe Danvers: One of the most popular commercial varieties. Bulbs medium large, globe shaped slightly flattened, deep orange-yellow color. Flesh is creamy-white. Necks small. Pkt. \$.08; oz. \$.15; $\frac{1}{4}$ lb. \$.45; lb. \$1.50.

Southport Yellow Globe: Another important commercial variety. A little later than Yellow Globe Danvers, globular, with slight taper to top and root. Color, size and keeping qualities about the same as Yellow Globe Danvers. Pkt. \$.08; oz. \$.15; $\frac{1}{4}$ lb. \$.45; lb. \$1.50.

Ebenezer or "Japanese": Recommended for home use. Bulbs large somewhat flattened with yellow skin and white, firm flesh. It matures early and keeps well. A leading variety for onion sets. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.50; lb. \$1.65.

Riverside Sweet Spanish: Similar to Prize-taker but larger. Has better skin and much better bred. Globular in shape with golden yellow skin; flesh white, very mild and of pleasing flavor. Either sow seed early in open ground or preferably indoors and transplant as soon as danger of freezing is over. Pkt. \$.10; oz. \$.25; $\frac{1}{4}$ lb. \$.70; lb. \$2.35.

White Portugal: An early flat white onion of good size and flavor. Excellent for family use or market. Matures earlier than Yellow Globe Danvers and keeps fairly well. When sown thick in a "ribbon row" the onions mature when small and are excellent for pickling. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.65; lb. \$2.15.

Southport Red Globe: The largest and finest red onion. Bulbs perfectly round, with small neck and thick, deep purplish red skin; flesh white tinged with pink; of strong flavor. Productive and good keeper. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.65; lb. \$2.15.

★Ebenezer or "Japanese Sets":

For the first time we are offering sets of our own growing. These sets were produced on rich sandy loam and are the finest we have offered in years. They have been carefully cured and graded and are now in storage.

These sets can be used for green onions or may be left and will produce large dry onions for early market. Very few of the plants of this variety go to seed. Lb. \$.25; pk. (8 lbs.) ~~\$.85~~ ~~bu. \$1.60~~
~~2 1.35~~ ~~5.40~~

LAXTON'S PROGRESS

PEAS

1 lb. will sow 100 ft. row

Surprise or Eclipse: 61 days. We are not listing see any place for it. Surprise is just as early and productive and of far better quality. It is a sweet wrinkled variety growing 28 to 30 inches tall. The pod is 3 inches long containing 6 to 8 peas. Only desirable for home garden. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$2.65; 100 lbs. \$15.20.

Little Marvel: 62 days. One of the older varieties of if not the best. Our experience is that it will outyield Surprise and is more dwarf, growing only 18 inches tall. The pods are about 3 inches long, 7 to 8 peas in a pod. Neither one of these varieties are desirable for shipping as the pods are too small. Little Marvel is much better for home markets, the pod being a dark green. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$3.30; 100 lbs. \$19.00.

Laxton's Progress: 62 days. The most popular of the local market and shipping varieties. Vines 16 to 18 inches high. Pods $4\frac{1}{2}$ to 5 inches long, pointed containing 7 to 9 large peas of good quality. Pods grow singly on vine. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$2.95; 100 lbs. \$17.00.

Thomas Laxton: 63 days. A popular, medium early variety for home and market garden. Vines 30 to 36 inches tall. Pods $3\frac{1}{2}$ to $3\frac{3}{4}$ inches long, square ended containing 7 to 8 large tender peas of good quality. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$2.95; 100 lbs. \$17.00.

Midseason Giant: 67 days. Matures after the early varieties and seems to stand the hot weather better than most varieties of this season. The vines grow about 20 inches high. The $4\frac{1}{2}$ inch pods contain 8 to 9 large peas of good quality. Pods are dark green which make it a desirable shipping variety. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$3.15; 100 lbs. \$18.00.

Alderman or Improved Telephone: 74 days. This variety is so much better than the old Telephone that we no longer list that variety. Alderman is the late variety commonly used in sections where peas are grown for shipping. The vine grows about 40 inches tall, the pods $4\frac{1}{2}$ to $5\frac{1}{2}$ inches long, dark green and contain 8 to 10 plump large peas. We consider Alderman the best tall pea. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$2.55; 100 lbs. \$14.30.

Improved Stratagem: 79 days. A superior late that seems to be quite resistant to wilt. Vines grow about 25 inches high and set a good crop of dark green pods about $4\frac{1}{2}$ inches long, 8 to 10 large peas in a pod. $\frac{1}{2}$ lb. \$.20; lb. \$.35; 15 lbs. \$3.00; 100 lbs. \$17.00.

PARSNIP

 $\frac{1}{2}$ oz. will sow 100 ft. row

★**Harris Model:** An improved strain of the old the sides. The roots are well shaped, smooth and white. We grow this seed from selected transplanted roots. This increases the cost but we feel that it is worth it to the gardener who wants quality parsnips. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.40; lb. \$1.00.

PUMPKIN

1 oz. will sow 20 hills

Winter Luxury: 100 days. An early variety for the home garden and local market. A trifle larger than small sugar; weighing from 7 to 8 pounds. Skin is orange-yellow covered by light netting. Flesh thick and fine flavored. Pkt. \$.05; oz. \$.12; $\frac{1}{4}$ lb. \$.30; lb. \$.90.

Small Sugar or New England Pie: 118 days. Small orange colored variety weighing from 6 to 8 pounds. Flesh is thick, sweet and fine grained. The common pie variety. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.25; lb. \$.60.

Connecticut Field: 120 days. The large pumpkin that used to be grown in every corn field. Rather coarse for home use but used extensively for canning and stock feeding. Weigh from 15 to 20 lbs. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.20; lb. \$.55.

EBENEZER ONIONS RAISED FROM SETS

See page 9 for prices on Ebenezer sets

A STEM OF OUR SPECIAL STRAIN OF JOHN BAER TOMATO

TOMATOES

1 oz. will produce 2000 plants

Earliana: 66 days. A very early variety for the home and market garden. This variety has been improved a great deal in the past few years so that the fruits are much smoother than they originally were. The vine is only medium size and the yield is not as large as is obtained with later varieties. Fruits flattened, medium sized, firm, bright red. Pkt. \$.10; oz. \$.45; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00.

Break O'Day: 70 days. A new wilt resistant variety originated by the U. S. Dept. of Agriculture. Fruits medium large, orange red, globe-shaped, smooth. On account of the light vine growth and yellow cast in the color we can only recommend this variety where wilt is a factor. Pkt. \$.10; oz. \$.50; $\frac{1}{4}$ lb. \$1.35; lb. \$4.50.

★ **John Baer:** 70 days. The best main crop tomato in most sections. This strain was developed at the Geneva Experiment Station and has proven to be better than the old strains. Fruits medium sized, semi-globular, very attractive bright scarlet-red, smooth and quite firm. Colors well around stem. Pkt. \$.10; oz. \$.50; $\frac{1}{4}$ lb. \$1.35; lb. \$4.50.

★ **Marglobe:** 79 days. A medium late wilt resistant variety that has become very popular. It is a heavy grower and quite productive. The fruits are medium to large, nearly globular, smooth and very solid. Very fine quality. This variety is also used extensively for green tomatoes. We have been growing Marglobe for several years and have a very fine strain. Pkt. \$.10; oz. \$.50; $\frac{1}{4}$ lb. \$1.35; lb. \$4.50.

Oxheart: 90 days. A distinct, attractive variety recently introduced and becoming very popular. Fruits extremely large, somewhat rough, heart shaped, pink; very solid meat and of very mild flavor. Moderately productive but rather late for our climate. Pkt. \$.10; oz. \$.60; $\frac{1}{4}$ lb. \$1.75; lb. \$6.00.

RADISH

1 oz. will sow 100 ft. row

Early Scarlet Globe: 24 days. The most popular variety for both commercial and home use. Olive shaped and rich bright scarlet in color. The flesh is white and tender. Tops are small. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.20; lb. \$.55.

French Breakfast: 25 days. A slim scarlet variety with a white tip. Roots $1\frac{1}{2}$ inches long by $\frac{1}{2}$ to $\frac{3}{4}$ inches thick. Must be used as soon as large enough as it becomes pithy very quickly. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.25; lb. \$.70.

Icicle: 27 days. The best early white radish. Roots are 5 to 5 $\frac{1}{2}$ inches long, slender, tapering at the tip. Flesh clear white and very crisp, will remain edible longer than the early varieties. We suggest mixing this with either Scarlet Globe or French Breakfast. In pulling the earlier variety you make room for the Icicles to bottom. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.25; lb. \$.65.

SALSIFY or Vegetable Oyster

1 oz. will sow 100 ft. row

Mammoth Sandwich Island: An improved variety that grows very large and is of fine quality. Roots 6 to 8 inches long, 1 to $1\frac{1}{2}$ inches thick, tapering, smooth, dull white. Pkt. \$.10; oz. \$.20; $\frac{1}{4}$ lb. \$.60; lb. \$1.85.

Do not miss trying Golden Cross Bantam Sweet Corn. See page 7.

EARLY WHITE SPINE CUCUMBER NO. 2603

For description see page 8

SPINACH

1 oz. will sow 100 ft. row

Long Standing Bloomsdale: 42 days. Very popular for spring sowing. Leaves are deep green, much curled and savoyed, holds without going to seed much longer than the old Bloomsdale. Pkt. \$.05; $\frac{1}{4}$ lb. \$.12; lb. \$.26; 10 lbs. \$.240.

King of Denmark: 46 days. An excellent long standing spring variety used extensively by canners and market gardeners. Plant is large and spreading. Leaves dark green, only slightly crumpled. Pkt. \$.05; $\frac{1}{4}$ lb. \$.12; lb. \$.28; 10 lbs. \$.260.

Blight Resistant Savoy: 39 days. Bred at the Virginia Experiment Station for blight resistance. Not good for spring planting as it goes to seed quickly in hot weather. Recommended for late summer planting for fall use. Dark green, heavily savoyed. Pkt. \$.05; $\frac{1}{4}$ lb. \$.12; lb. \$.27; 10 lbs. \$.250.

New Zealand: 70 days. Not a true spinach; thrives in hot weather. It is spreading in habit, leaves are small, dark green and can be picked repeatedly throughout the season, plants continue to put out new shoots until frost. Many people like this variety, however to us, the "greens" have a peculiar flavor and are not to be compared with the other varieties. Seed should be soaked for 24 hours before planting. Pkt. \$.05; $\frac{1}{4}$ lb. \$.15; lb. \$.45; 10 lbs. \$.425.

SQUASH

Giant Summer Straightneck: 55 days. An improvement over the old Bush Crookneck as it packs better for shipping. Our seed stock is raised by one of the most careful growers in the East. We inspected the field before harvesting and have never seen a lot of summer squash so true to type. Pkt. \$.08; oz. \$.20; $\frac{1}{4}$ lb. \$.55; lb. \$.170.

Short Cocozelle: 63 days. One of the best known Italian squashes. Weighs 3 to 4 pounds; cylindrical, dark green with lighter green turning to golden stripes. Flesh greenish white and of fine flavor. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.40; lb. \$.135.

Table Queen or Des Moines: 58 days. Also called acorn. We have been for several years recommending this variety. All at once it has become very popular. Everyone seems to prefer it to the larger varieties. These individual squashes are 5 to 6 inches long by $4\frac{1}{2}$ inches in diameter, ribbed, smooth and dark green. Very prolific and keeps well. It is customary to bake these whole or halved. After baking cut in two lengthwise, take out seeds, add butter and seasoning and serve in the shell. Table Queen fits the needs of the small family, restaurant and hotel. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.40; lb. \$.120.

★**Delicious:** 102 days. One of the best quality winter squashes we know of. Fruit is top-shaped and weighs from 7 to 8 lbs. Skin dark green with light green stripes toward blossom end. Flesh is thick, dry and very fine quality. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.35; lb. \$.120.

Green Hubbard: 105 days. The standard winter squash. Fruit weighs from 10 to 12 lbs., pointed at both ends, slightly warted, dark bronze-green in color; flesh thick, orange-yellow. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.35; lb. \$.110.

★**Blue Hubbard:** 110 days. A large winter squash that each year is becoming more popular due to its excellent quality. Fruit large, long, pointed at both ends, skin blue-grey and slightly ridged; weighs from 12 to 14 pounds. We believe that we have one of the purest strains on the market. Pkt. \$.05; oz. \$.20; $\frac{1}{4}$ lb. \$.50; lb. \$.175.

Golden Hubbard: 110 days. Similar to Green Hubbard but earlier, smaller and more prolific. Popular with the canners. Fruits weigh 8 to 10 pounds, moderately warted. Skin orange-red. Flesh deep orange. Pkt. \$.05; oz. \$.15; $\frac{1}{4}$ lb. \$.35; lb. \$.100.

SWISS CHARD

1 oz. will sow 100 ft. row

Lucullus: 50 to 60 days. Desirable for home and market garden use. Large upright yellowish-green leaves; heavily crumpled. Stem thick, broad, light green in color; most popular of chards. Pkt. \$.05; oz. \$.12; $\frac{1}{4}$ lb. \$.25; lb. \$.80.

Fordhook Giant: Leaves broad, upright in growth, very dark green, crumpled with broad white mid-rib. Pkt. \$.05; oz. \$.12; $\frac{1}{4}$ lb. \$.30; lb. \$.85.

TURNIPS

1 oz. will sow 100 ft. row

Seed hot water treated

★**Purple Top White Globe:** 55 to 60 days. The best of the white varieties for home garden and shipping. Roots large, globe shaped, smooth, upper part purple-red, white below; flesh white, sweet, crisp and tender. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.20; lb. \$.55.

Golden Ball: An attractive variety for the home garden and market gardeners. Roots medium size, round, deep yellow. Flesh pale yellow, apt to be slightly bitter. Pkt. \$.05; oz. \$.10; $\frac{1}{4}$ lb. \$.25; lb. \$.70.

RUTABAGAS

 $\frac{1}{2}$ oz. will sow 100 ft. row

Improved Long Island: One of the best purple top, yellow varieties. Roots are medium sized, smooth and very good quality for table use. Pkt. \$.05; oz. \$.12; $\frac{1}{4}$ lb. \$.30; lb. \$.80.

Halls Westbury: A large rapid growing yellow variety with purple top and small neck. One of the most popular varieties grown in Canada. Pkt. \$.05; oz. \$.12; $\frac{1}{4}$ lb. \$.35; lb. \$.100.

We pay transportation on the above seed.

OUR CERTIFIED ALPHA BARLEY IS GROWN FROM HOT WATER TREATED SEED AND SHOWS NO SMUT

ALPHA BARLEY

2 to 2½ bu. will sow 1 acre

The most popular two-rowed variety in the East. Alpha is a heavy producing large kernalled barley with fairly stiff straw. Ripens a little later than the six row varieties; heads do not crinkle and break off. This makes it especially desirable for sowing with oats. **Certified Seed 1 to 10 bu. \$1.60 per bu.; 10 bu. or more \$1.50 per bu. Not prepaid.**

CORNELLIAN OATS

2 to 2½ bu. will sow 1 acre

This oat is grey in color and appears small due to the very thin hull. The kernel when removed from the hull is as large as that of the larger varieties. The feeding value of Cornelian is very high due to the high percentage of meat. A heavy producing, stiff strawed variety. **1 to 15 bu. \$1.15 per bu.; 15 bu. or more \$1.10 per bu. Not prepaid.**

ITHACAN OATS

A larger oat than Cornelian but has a heavier hull and about the same sized meat. Bright and of fine appearance. Yields about the same as Cornelian. **1 to 15 bu. \$1.15 per bu.; 15 bu. or more \$1.10 per bu. Not prepaid.**

CANADA FIELD PEAS

We have always taken great care in the selection of Canadian Field Peas to get seed that is free from disease and will ripen with Cornelian Oats and Alpha Barley. Our seed is grown in the far North and has given excellent yields. Each shipment is tested for blight at the New York Seed Laboratory. **1 to 5 bu. \$3.60 per bu.; 5 bu. or more \$3.50. Not prepaid.**

SOY BEANS

From the intensive growing of cash crops, many fields are now so low in fertility that they will no longer produce profitable yields. Rather than sow these fields to crops that do not pay their way why not sow them to Soy Beans? Plowing under this legume will build up your farm by supplying a vast amount of humus and plant food at a very low cost. Many worthless fields have been made to produce very profitable cash crops after Soy Beans.

Soy Beans should be sowed June 1st to 20th with a grain drill using all runs and placing the seeds about 2½ inches apart in the rows. About 78 lbs. of seed are required per acre.

Soy Beans seed must be inoculated to produce a maximum crop.

Wilson Black: A tall, fine-stemmed, leafy variety. This vigorous growing strain has proven to be the best adapted for New York State conditions through experiments conducted at Ithaca. It will produce a heavy succulent growth desirable for forage or green manure. **1 to 60 lbs. \$.04 per lb. 1 bu. or more \$2.40 per bu. Not prepaid.**

CORNELLIAN OATS PRODUCE HEAVY YIELDS AND ARE HEAVY

HERBS FOR FLAVORING, Etc.

Dill: Long Island Mammoth. Largest and most productive variety. Pkt. \$.05; oz. \$.10; ¼ lb. \$.20; lb. \$.60.

Pepper Grass: Extra Fine Curled. Pkt. \$.05; oz. \$.10; ¼ lb. \$.25; lb. \$.75.

Summer Savory: Easily grown. Sow seed in open ground. Pkt. \$.05; oz. \$.12; ¼ lb. \$.30; lb. \$1.00.

Sage: Broad Leaved, a perennial that will last for years. Pkt. \$.05; oz. \$.20; ¼ lb. \$.60; lb. \$2.00

A CORNER OF 30 ACRES OF OUR ROBSON SEEDLING POTATOES

POTATOES

Robson Seedling: A number of years ago we originated this variety from seed taken from a potato blossom seedball. We grew it on our own farms and in the test plot at the New York State College of Agriculture. It proved to be a heavy yielder, and a vigorous grower. On account of its desirability and the very enthusiastic reports from our customers we feel that we can strongly recommend this strain above all others that we have tested for home garden or field production.

The Robson Seedling is of the Rural type, medium late, excellent shape for baking and will hold firm much later in the spring than most other varieties.

In spite of the very dry season our fields averaged over 300 bushels per acre. One peck by parcels post \$.75 postpaid; 1 to 5 bu. \$1.35 per bu. 5 bu. or more \$2.25 per bu. Not prepaid. ~~NO 2 SIZE~~ seed \$1.00 per bu. Not prepaid.

Prince Edward Island Certified Irish Cobblers: There is always a demand for this early round, white, high quality potato. Inasmuch as Irish Cobblers matured in this climate during hot weather are greatly weakened in vitality, we have our seed grown on Prince Edward Island, Canada, where the weather is cool and the soil well adapted to the growing of seed potatoes.

This stock is inspected and certified by the Canadian Government. It is medium size and smooth. Many growers report 300 bushel per acre yields from our seed. 1 peck by Parcels Post \$.95 postpaid. 1 to 5 bu. \$2.50; per bu. 5 bu. or more \$2.40 per bu. Not prepaid.

SEED CORN

With the exception of the Leaming all of our seed corn is grown near Hall, N. Y. Northern Grown Seed Corn gives better yields.

Extra Early Cornell 11: In many sections of the East Cornell 11 has been too late in maturing to be an ideal husking corn. With this in mind we have been breeding for an earlier maturing strain of this very desirable variety.

We now have an Extra Early Cornell 11 that ripens fully two weeks earlier than the old strain. The stalk is of good height, 7 to 9 ft., the ears are 8 to 9 inches long and have 14 to 18 rows of yellow dented kernels arranged on a small cob.

Under favorable conditions Extra Early Cornell 11 will fully mature in 90 days. We have had many reports of yields of over 100 bushels of ears per acre. One peck by Parcels Post \$.85 postpaid; ½ bu. \$1.25; bu. \$2.25. Not prepaid.

Cornell 11 for the Silo: This is the strain of Cornell 11 that we have handled for a number of years. We especially recommend it for use in the silo. The stalks grow slightly taller than the early strain and the ears are a little larger.

This seed was carefully field selected and dried by special equipment so as to insure high germination and strong vitality. One peck by Parcels Post \$.85 postpaid; ½ bu. \$1.25; bu. \$2.25. Not prepaid.

West Branch Sweepstakes: A later variety than Cornell 11.

Produces more tons of green weight but cannot be depended upon to fully ripen under most New York State conditions. Sweepstakes is adapted for silage in this State. The ears are very similar in shape to Cornell 11 but the kernels are red and somewhat larger. One peck by Parcels Post \$.85 postpaid; ½ bu. \$1.25; bu. \$2.25. Not prepaid.

Improved Leaming: One of the most popular silage corns. Too late to ripen in most sections of New York State except under very favorable conditions. Stalk is tall, ears large, kernels yellow. One peck by Parcels Post \$.85 postpaid; ½ bu. \$1.00; bu. \$1.75. Not prepaid.

Use Crow-Fez crow repellent. Prices on opposite page.

Mr. Roy Magruder
U. S. Dept. of Agri.
Washington, D. C.

Dear Sir:

In reply to your letter of July 20th.

Under separate cover we are mailing you a copy of our catalog. We wish to call your attention to Early Seneca cabbage listed on page 3. This variety was originated and introduced by us two years ago.

We trust you will find this variety of value to you in your work.

Very truly yours

MARKET GROWERS JOURNAL

A publication for the Commercial Vegetable Producer. Issued the first and fifteenth of each month. The aim is to offer information, practical pointers, news of the market gardening industry, business service, inspiration and sound leadership. Especially valuable to Eastern Vegetable Growers.

Subscription price, \$1.00 per year; \$2.00 for three years. Include your subscription with your seed order.

CROW-FEZ (Crow Repellent)

Various crow repelling preparations are now being offered growers for protection of planted seed corn. Invariably their cost is so great as to prohibit their use by the general public, and in consequence a demand for a more moderate priced repellent has come to our attention. To meet this demand and to place in the hands of all farmers an economically priced repellent that all growers could afford to use we have brought onto the market "Crow-Fez"—a preparation which embodies all the repelling qualities of the higher priced repellents at a cost to the consumer of about one-half the price of present repellents. 1/2 pint can, 60c. treats 1 bu. of corn. 1 pint can, \$1.00, treats 2 bu. of corn. 1 quart can, \$1.50, treats 4 bu. of corn. Prepaid.

Legume Stimugerm Cultures

Every crop rotation schedule should include a Legume crop. Legumes, when inoculated with the proper bacteria draw nitrogen from the air and convert it into nitrate form, suitable as plant food. Much of this is stored in nodules on the roots of the plants for the benefit of future crops, and when the crop itself is turned under, the nitrogen in the plants is also returned to the soil.

Cultures are obtainable for Alfalfa and all of the Clovers. 1/2 bushel size, 35c; 1 bushel 65c; 2 1/2 bushels \$1.40.

Culture for Peas, including Canada Field, Garden and Sweet; Beans, including Garden, Lima, Soy, and Velvet; Lupines and Vetch can be had in the bushel size at 35c; 2 bushels, 65c; 5 bushels, \$1.40. Prepaid.

Be sure to specify what crop culture is to be used for.

Pot Labels and Garden Stakes Keep a record of the kind and variety of seeds sown, dates, etc. Every gardener should use stakes and labels.

POT LABELS	Plain	
	100	1000
4 in. long, Postpaid.....	\$.25	\$1.65
5 in. long, Postpaid.....	.25	1.75
GARDEN STAKES. 12 in. long, 1 1/8 in. wide, plain, doz. 25c; 100, \$1.00. Postpaid. These are nice smooth white wooden labels of best quality.		

Millions of HOTKAPS Guard Growing Crops

HOTKAPS are waxed paper cones, easily set out in quantity over seed or growing plants. They guard against rain, frost, cold, wind, hail, birds and insects, and maintain perfect mulch. Growth is forced and yield is increased 10 to 25 per cent. Crops mature 2 to 3 weeks earlier, and bring premium prices. Prices: 1,000 for \$10.00; 250 package with setter and tamper, \$3.65; 100 package with setter and tamper, \$2.40; steel setter, \$2.25. Garden setter 50c. Prepaid.

FLOWER SEEDS

In selecting a list of flower seeds we have kept in mind, not the professional gardener, florist or specialist but rather the amateur who wants an abundance of flowers throughout the season. These varieties are easy to grow and suitable to our climatic conditions.

ANNUALS

Antirrhinum: (Snapdragon—Intermediate). Graceful 2 ft. spikes of large flowers closely placed on the stem. The spikes are not as spindly as the taller sorts and make a much better appearance. Choice mixed colors. Pkt. \$.10; ¼ oz. \$.35.

Aster: Double Giant Crego. This class also called "Ostrich Plume" and "Giant Comet," are of fine size, have long, shaggy, twisted petals. They are undoubtedly the most popular of all Asters. Crimson, Pink, Purple and White. Pkt. \$.10; ¼ oz. \$.75; Mixed Pkt. \$.10; ¼ oz. \$.60.

Aster: Double American Branching. The plants are quite spreading and bear many good sized blooms which are fully double with petals evenly incurved. Splendidly suited for both bedding and cutting. White, Red, Lavender, Pink, Purple and Rose. Pkt. \$.10; ¼ oz. \$.60; Mixed colors, pkt. \$.10; ¼ oz. \$.50.

Calendula: (Pot Marigold). One of the most useful and showiest annuals for the garden, or as a cut flower. Blooms all summer requiring very little care. Choice mixed, 8 varieties: Pkt. \$.10; oz. \$.30.

Campanula: (Canterbury Bell). Branching plants 2 ft. tall heavily loaded with large pendant bells. The flowers appear in white, blue and pink shades. Annual. Single mixed colors. Pkt. \$.25.

Centaurea Cyanus: (Bachelor Button). Produces handsome large, double blooms which are effective for out-of-door plantings and make fine bouquets. Blue, Rose, White, Carmine and Mixed: Pkt. \$.10; ¼ oz. \$.30.

Chrysanthemum: Single Annual. A free flowering class, producing gay daisy-like blooms of delicate coloring poised on long stiff stems. Excellent for bouquets. Mixed colors. Pkt. \$.10; ½ oz. \$.25.

Cosmos: Extra early, mammoth single. A choice plant for late summer and autumn flowering. They are of fine bushy habits with feathery light green foliage. The handsome flowers and broad petals often overlapping and fluted. Blooms best in rather poor soil. Mixed colors: Pkt. \$.10; 1 oz. \$.45.

Larkspur: (Annual Delphinium). Feathery foliage which sets off the handsome spikes of double blossoms. Colors range from white, lavender and pink to brilliant hues. Mixed colors: Pkt. \$.10; ½ oz. \$.25.

Morning Glory: One of the most satisfactory of our climbers. The crimson and blue flowers are produced in great profusion and the heart shaped leaves are very attractive as foliage. Mixed colors: Pkt. \$.10; oz. \$.30.

Nasturtium: Double Golden Gleam. This double, sweet scented nasturtium is one of the finest new introductions that we have ever seen. The plant is bushy and large. The semi-double yellow flowers are borne on long stiff stems that bring the flowers well above the foliage. Pkt. \$.15; large pkt. \$.25.

Nasturtium: Dwarf. Low growing bushy variety, is about 12 inches high and is well suited for borders along roadways and paths. Mixed colors: Pkt. \$.10; 2 oz. \$.20; ¼ lb. \$.35.

Nasturtium: Tall. This climbing variety is adapted to cover a fence, trellis or wall. Mixed colors: Pkt. \$.10; 2 oz. \$.20; ¼ lb. \$.35.

Pansy: Large flowered. Flowers are of good size and shape. Very desirable for beds. Choice mixed varieties: Pkt. \$.10; ¼ oz. \$.50.

Petunia: Hybrida. Forms fine bushy plants that are very valuable in replacing gaps made by the passing of early spring flowers. Mixed colors: Pkt. \$.10; ¼ oz. \$.30.

Phlox Drummond: About 12" high. One of the most delightful of annuals. The bright vivid, fresh colored flowers bloom in profusion all through the season. Equally good for bedding or cutting. Mixed colors. Pkt. \$.15; large pkt. \$.30.

Phlox: Star: Fringed, toothed edges of petals give flowers the appearance of twinkling stars. Mixed colors. Pkt. \$.15; large pkt. \$.30.

Scabiosa: (Pin Cushion Flower). An old flower that has been popular for many generations. Excellent for making up bouquets. Flowers are fragrant and are produced in great abundance. Mixed colors: Pkt. \$.10; ½ oz. \$.40.

Verbena: Hybrida. This is the reliable bedding type. Flowers are large and are borne in great clusters. Choice mixed colors: Pkt. \$.10; ¼ oz. \$.30.

Zinnia: Double Dahlia Flowered. These are extremely robust. The flowers are large and are borne on rigid stalks. Mixed colors: Pkt. \$.10; ½ oz. \$.60.

Sweet Peas: Early Flowering Spencer. The largest and best variety for both greenhouse and garden. Flowers are large, beautifully waved and carried on long stems. Mixed colors: Pkt. \$.10; oz. \$.30; ¼ lb. \$1.00.

Sweet Peas: Late Spencer. Three to four weeks later than the earlier variety. Larger and more vigorous vine. Choice mixed colors: Pkt. \$.10; oz. \$.20; ¼ lb. \$.70.

PERENNIALS

Aquilegia: (Long Spurred Columbine). One of the finest early garden perennials. The long spurred flowers are produced on strong graceful stems. The plant is hardy and will thrive in almost all situations but prefers partial shade and plenty of moisture. Pkt. \$.15; Large pkt. \$.25; ¼ oz. \$1.00.

Coreopsis: Lanceolata Grandiflora. Large yellow daisy-like flowers produced on long graceful stems. Uninterrupted blooms for a long season. Single pkt. \$.10; ¼ oz. \$.25; semi-double pkt. \$.15.

Wrexham Delphinium: A comparative new type sometimes known as the Hollyhock Delphinium. The spikes are immense, set with large flowers very closely placed on the stem. The choicest colors mixed. Pkt. \$.25; large pkt. \$.50.

Gaillardia Grandiflora: (Blanket Flower). Large single flowers with rich maroon centers circled by orange edges. Hardy and very free bloomer. Mixed pkt. \$.10; ½ oz. \$.25.

Gypsophila Paniculata: (Baby's Breath). Produces sprays of tiny rose-shaped white flowers. Pkt. \$.25.

Hollyhock: Double Fringed. Extremely double flowers that resemble small peonies. Mixed pkt. \$.25; ¼ oz. \$.75.

We pay transportation charges on all of the above seed.
